React Router - Restaurant App

1. Build a new rails/react app with create-repack-app.
2. You may have auth associated with the app. (done the same way as today's lecture)
3. A couple ways to structure your models
 1. A restaurant has a menu and a menu has menu_items. (more advanced)
 2. Just have a menu model that has menu_items. (easier)
4. Implement all CRUD actions
5. Use React Router v4 to create multiple pages.
6. Style the app with something
7. Push the assignment up to GitHub

What To Focus On

- State: What is it, how to access it, and how to update it.
- Props: What is it, how to access it, how to pass it, and how it differs from state.
- How to build class and functional components and how to use them
